

SAUGAAT GIFTING PORTAL

PROJECT DELIVERY & CAPABILITIES REPORT

1. Project Deployment Links

Production Vercel URL: <https://saugaat.vercel.app>

GitHub Repository: <https://github.com/Xtertm3/Saugaat.git>

ðŸŒŽ Testing / Demo Credentials Access

Customer Persona: Email: customer@saugaat.com | Password: saugaat123

Admin Persona: Email: admin@saugaat.com | Password: saugaat123

2. Implemented Features

Note: These credentials bypass standard Supabase email check blocks for easy reviewer check.

- **Header Optimization:**
Reduced vertical size (64px logo), removed the top 10% off banner, and set matching translucent glass color (rgba(252,251,250,0.92)) blending with the Soft Ivory home theme.
- **Authentication Mock-bypass System:**
Integrated state-based login session handles inside AuthContext.tsx persisting in localStorage, allowing login toggling directly.
- **Premium Landing Page Overhaul:**
Added golden-glow linen textures, luxury category grids, double-image overlapping layouts, trust markers, and rating stars.
- **Visual Customer Dashboard:**
Created loyalty point meters, progress bars to Platinum, dynamic package delivery timelines with pulse tags, updates streams, and quick services grids.
- **Admin Command Console:**
Added weekly sales trend SVG graph tooltips, category metrics share bars, live orders tables, inventory alarms with restocking hooks, and collapsible side navigation.
- **Expanded 20-Product Database:**
Populated mockData.ts with 20 premium visual products representing all categories.

3. Future Roadmap Backlog

Phase 2: Core Database Integrations

- Sync live product additions directly from ProductManagement.tsx to Supabase.
- Integrate subcategories structure mappings on database levels.
- Save transactions history inside active relational tables.

Phase 3: Checkout & Gifting Enhancements

- Incorporate live Razorpay/Stripe API testing checkouts.
- Build custom handwriting calligraphy greetings editor on checkouts.
- Deploy Gifting Planner schedule calendars with email alerts.

4. Build & Deployment Verification

The codebase compiles successfully with no warnings or errors. Verified locally via the bundler:

npm run build

All changes have been committed and pushed to git branch origin main:

git push origin main

Deployment triggers successfully on Vercel upon push completion.
